The 8 day the moone goeth to a quadrate b. of Mars at 9 a clocke before noone. The

morie

Date

The week-days mentioned (Sept. 1 = Monday, etc.) show Easter must have fallen on March 23, 30, April 6, 13, or 20.

In the 16th century, Easter fell on one of these days in 1505, 1511, 1516, 1522, 1533, 1539, 1544, 1550, 1561, 1567, 1572, 1578, 1589, 1595, 1600.

I have compared the dates of the moon's phases in this fragment with the dates of eclipses for these years in Oppolzer 'Canon der Finsternisse'; this seems to leave 1561 and 1572 as alone possible. The dates and times of the moon's phases in Leovitius' 'Ephemerides' eliminate 1572 and show 1561 fits exactly.

Frg. 1 joins on to Frg. 2, and Frg. 3 to Frg. 4. The enclosed folded sheet shows how they join, and also which dates each part of the 4 Frgs. covers, and which dates were dealt with on wholly missing leaves.

The Frgs. are from two 8° sheets, which

when complete covered ca. Aug. 1 - Nov. 17, i.e. 3½ months, so that the whole year would fill rather less than 7 sheets. ~~It therefore seems likely that the Sup. are from sheets D and E of a prognostication collating A-H⁸~~

The only known prognostication of comparable length is Nostradamus' prognostication for 1559 (Boscanquet XLIX), which collates A-F⁸; but the contents are quite different, being largely concerned with political events and the like.
